SAMUEL J. TILDEN.

A Mouse Captured by a Spider. A few days ago a gentleman in the west part of the city discovered a mouse in a corner of his cellar, and noticed that it was struggling to escape from some restraint. Examination showed that one of the hind legs of the little animal was held by several fibres of a spider's web attached to a piece of hose suspended above. This leg was drawn up from the bottom of the cellar, and with the other three legs the animal was scratching to free himself. The spider-not a very large one-was busy in multiplying the fastenings and making everything more secure. The gentleman took precautions to leave the animal and insect undisturbed, and watched the progress of this curious exhibition of engineering. The next day the spider had extended its web to the other legs of the mouse, which was alive, but much weakened, possibly from the bite of the insect. Finally the mouse died. The engineering proare Democrats and they will not interfere officially unless by peremptory orders. These orders, under the light of existing circumstances, will hardly be issued. In stages, will hardly be issued. In the damage that the dam the gentleman from home, some accident befell the works of the little engineer, and the sustaining webs were broken. There was a fall of mouse meat simultaneously with the fall in coal. During the operations of the spider, several of the neighbors of the gentleman called in to watch the performances of the
